COORDINATED CLINICAL RESEARCH

WWW.SANDIEGOTRIALS.COM

Director of Clinical Research

Jonathan Licht, MD

EDUCATION

EMG & Neuromuscular Fellowship
Henry Ford Hospital, Detroit, NH
1985-1986

Neurology Residency
Henry Ford Hospital 1983-1985
University of Califomia Irvine 1980-1981

Internship
Henry Ford Hospital 1979-1980

Medical School
Wayne State University, Detroit 1975-1979

Undergraduate
University of Michigan, Ann Arbor
1971-1975

CERTIFICATION

Neurology
Diplomate of American Board of Neurology and Psychiatry, November 1987

Electrophysiology
American Board of Electrodiapostic Medicine, April, 1989.

I.M.E, Q.M.E. State of Califomia

Michigan and Califomia Licenses

Message from Our Director
Multiple Sclerosis Study at Coordinated Clinical Research (CCR)

Founded in 1996, Coordinated Clinical Research (CCR) is a subsidiary of the Center for Neurologic Study (CNS). Located in San Diego, CCR has been a leader in neurological research since 1979 and has collaborated with pharmaceutical and biotech companies for years to develop cutting edge therapies for neurological disorders. We are committed to continuing this tradition of outstanding research and patient care. All of our physicians are board certified neurologists and electrophysiologists and not only perform research, but also function in private practice keeping them in touch with their patients needs. We are experts in **Phase II & III clinical trials** in MULTIPLE SCLEROSIS STUDIES and are capable of studies in the following areas:

- ✓ Relapsing Remitting Multiple Sclerosis (RRMS)
- ✓ Secondary Progressive Multiple Sclerosis (SRMS)
- ✓ Primary Progressive Multiple Sclerosis (PPMS)
- ✓ Progressive Relapsing Multiple Sclerosis (RPMS)

We have experiences in variety of assessment tools specific to multiple sclerosis studies including:

- ✓ EDSS
- ✓ 9-HPT
- ✓ SDMT
- ✓ VFT
- ✓ Timed 25-foot walk
- ✓ Intravenous (IV) study medication administration

We have partnership with other specialized facilities to meet unique needs in your study:

- ✓ Phlebotomy (PK samplings)
- ✓ Scripps Memorial Hospital (Overnight studies)
- ✓ Radiology (X-ray, CT-scan, MRI, DEXA scan, Mammogram, etc)

Thank you for considering our site for your multiple sclerosis studies. I am confident that our site will perform beyond your expectations.

Jonathan M. Licht, M.D.
Director
Coordinated Clinical Research

Superior Recruitment Strategies—How We Minimize SF

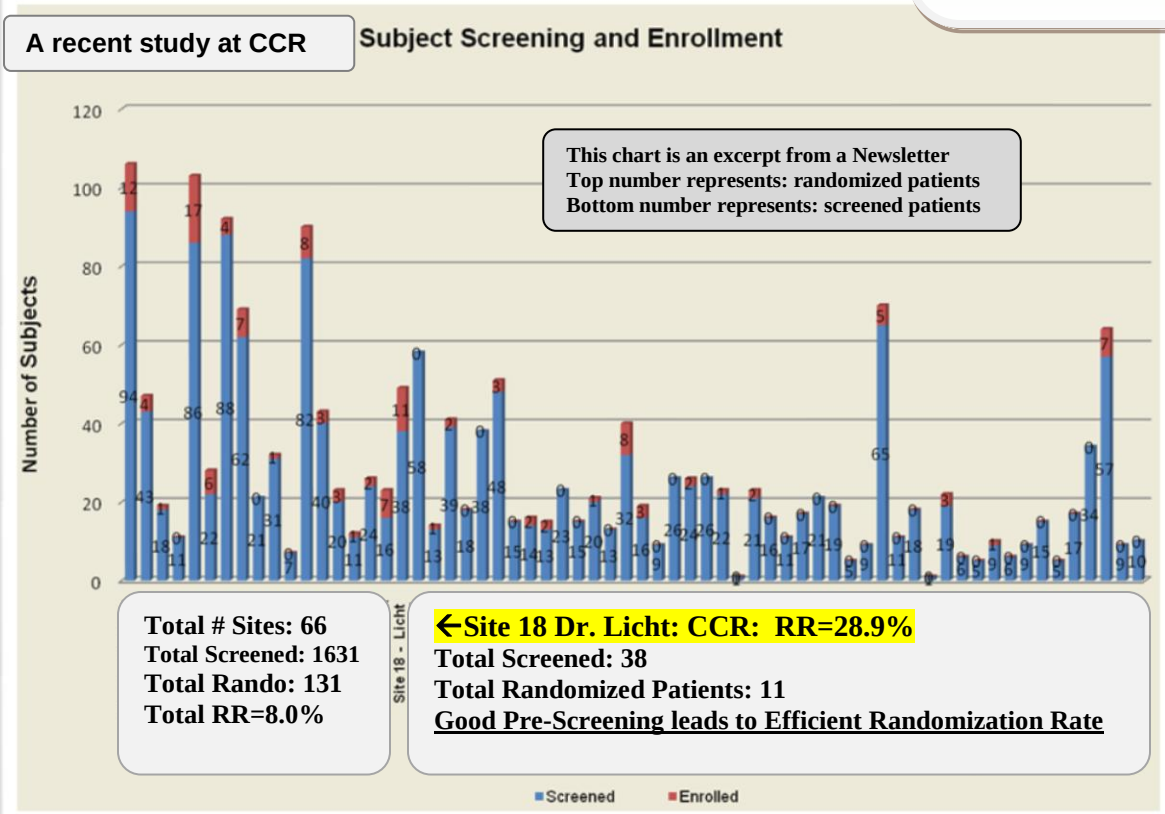
At Coordinated Clinical Research, we only accept the studies that we feel confident enrollment goals will be met or exceeded. Most of our patients come from the following sources:

- ✓ Research patient database
- ✓ Private practice patient database (PI and Sub-I)
- ✓ Physician referrals
- ✓ Radio/TV advertisements
- ✓ Newspaper/local free paper advertisements
- ✓ Direct mail

We minimize screen failures by interviewing potential subjects as thoroughly as possible, utilizing an IRB approved telephone questionnaire specific to the study.

A recent diabetic neuropathy study had an overall randomization rate (RR) of 8.0% with 1631 screened and 131 randomized. CCR was able to achieve <u>one of the highest randomization rates with fewer screening failure.</u>

A recent study at CCR



Total # Sites: 66
Total Screened: 1631
Total Rando: 131
Total RR=8.0%

←Site 18 Dr. Licht: CCR: RR=28.9%
Total Screened: 38
Total Randomized Patients: 11
<u>Good Pre-Screening leads to Efficient Randomization Rate</u>

Staffs

- Three experienced coordinators
- Unblinded pharmacists
- eCRF/Paper CRF capabilities
- Central IRB
- Budget/Contract within 5 working days
- Bilingual staffs (Spanish)

Facilities

- Dedicated clinical research site
- Round-the-clock PK Sampling
- Partnership with renowned Scripps Memorial Hospital for overnight stays

Monitoring

- Dedicated monitoring space
- A conference room
- High-speed wireless Internet access
