

Director of Clinical Research

Jonathan Licht, MD

EDUCATION

EMG & Neuromuscular Fellowship
Henry Ford Hospital, Detroit, MI
1985-1986

Neurology Residency
Henry Ford Hospital 1983-1985
University of California Irvine 1980-1981

Internship
Henry Ford Hospital 1979-1980

Medical School
Wayne State University, Detroit 1975-1979

Undergraduate
University of Michigan, Ann Arbor
1971-1975

CERTIFICATION

Neurology
Diplomate of American Board of
Neurology and Psychiatry, November
1987

Electrophysiology
American Board of Electrodiagnostic
Medicine, April, 1989.

I.M.E, Q.M.E. State of California

Michigan and California Licenses

Message from Our Director Pain Study at Coordinated Clinical Research (CCR)

Founded in 1996, Coordinated Clinical Research (CCR) is a subsidiary of the Center for Neurologic Study (CNS). Located in San Diego, CCR has been a leader in neurological research since 1979 and has collaborated with pharmaceutical and biotech companies for years to develop cutting edge therapies for neurological disorders. We are committed to continuing this tradition of outstanding research and patient care. All of our physicians are board certified neurologists and electrophysiologists and not only perform research, but also function in private practice keeping them in touch with their patients needs. We are experts in **Phase II & III clinical trials** in PAIN STUDIES and are capable of studies in the following areas:

- ✓ Painful diabetic neuropathy
- ✓ Fibromyalgia
- ✓ Post-traumatic Neuralgia
- ✓ Post-herpetic Neuralgia

We have experiences in variety of safety and efficacy assessment tools specific to pain studies including:

- ✓ Nerve conduction test (Dr. Arezzo's Lab)
- ✓ Neurologic examination
- ✓ Intravenous (IV) study medication administration
- ✓ Pressure point testing

We have partnership with other specialized facilities to meet unique needs in your study:

- ✓ Rheumatologist
- ✓ Phlebotomy (PK samplings)
- ✓ Scripps Memorial Hospital (Overnight studies)
- ✓ Radiology (X-ray, CT-scan, MRI, DEXA scan, Mammogram, etc)

Thank you for considering our site for your pain studies. I am confident that our site will perform beyond your expectations.

Jonathan M. Licht, M.D.

Director
Coordinated Clinical Research

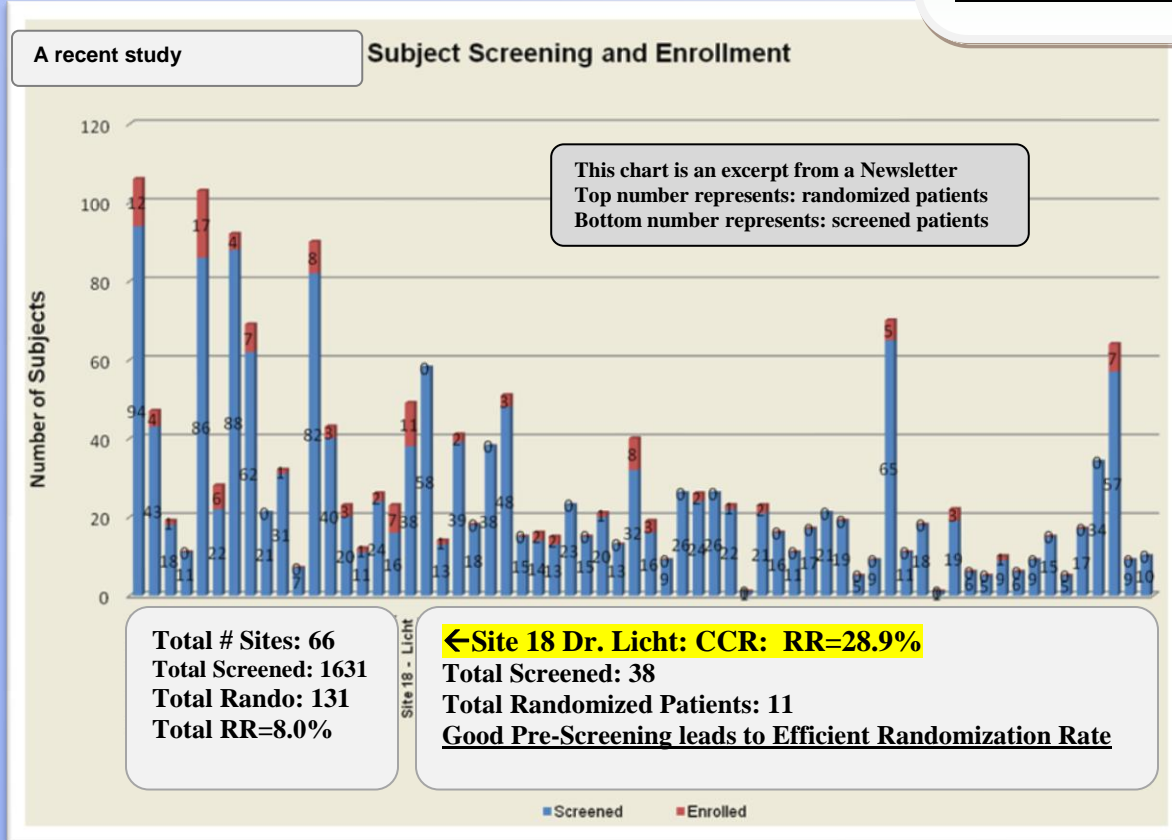

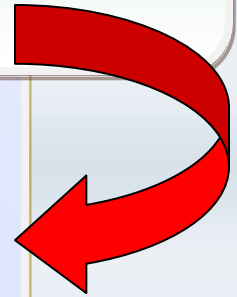

Superior Recruitment Strategies—How We Minimize SF

At Coordinated Clinical Research, we only accept the studies that we feel confident enrollment goals will be met or exceeded. Most of our patients come from the following sources:

- ✓ Research patient database
- ✓ Private practice patient database (PI and Sub-I)
- ✓ Physician referrals
- ✓ Radio/TV advertisements
- ✓ Newspaper/local free paper advertisements
- ✓ Direct mail

We minimize screen failures by interviewing potential subjects as thoroughly as possible, utilizing an IRB approved telephone questionnaire specific to the study.

A recent diabetic neuropathy study had an overall randomization rate (RR) of 8.0% with 1631 screened and 131 randomized. CCR was able to achieve one of the highest randomization rates with fewer screening failure.

Staffs

- Three experienced coordinators
- Unblinded pharmacists
- eCRF/Paper CRF capabilities
- Central IRB
- Budget/Contract within 5 working days
- Bilingual staffs (Spanish)

Facilities

- Dedicated clinical research site
- Round-the-clock PK Sampling
- Partnership with renowned Scripps Memorial Hospital for overnight stays

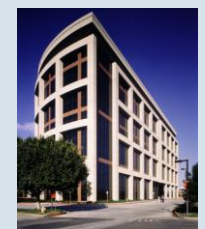

Monitoring

- Dedicated monitoring space
- A conference room
- High-speed wireless Internet access
